Claims 1-11 include allowable subject matter since the prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations. Endoh et al. (U.S. Patent No. 5,602,789), Tanaka et al. (U.S. Patent No. 5,627,782), and others, does not teach the claimed invention having an apparatus and a method of a nonvolatile memory device comprises a means for determining, when said sub-block erase verify read results in failure to affirm that said memory cell is in the erase state and when said over-programmed memory cell is absent, whether an execution number of said sub-block erase reaches a predefined allowable number and

for permitting re-execution of said sub-block erase when the execution number does not reach the allowable number and otherwise terminating the processing while regarding the erase as being in executable when the execution number reaches the allowable number; means for determining the erase is completed to thereby terminate the processing when said memory cell to be erased becomes in the erase state during said sub-block erase verify read.
